

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Original) A method for the provision of network operator-specific performance features of different mobile radio network operators for a mobile radio customer, wherein the mobile radio customer has a Smart Card, on which a subscriber relationship of the mobile radio customer with a mobile radio network operator is defined, wherein on the Smart Card (2) of the mobile radio customer at least two subscriber relationships (3;4) are defined with different mobile phone numbers and with separate performance features, and each subscriber relationship is assigned in each case to a mobile radio network operator, characterized in that an intelligent administration and control of call redirections is performed at each network operator provided for the mobile radio customer, in such a way that the call redirections of all involved networks, except for the network of the current location of the mobile radio customer, always point to the currently active identification and phone number of the mobile radio customer, wherein the call redirections are newly set accordingly with each change of the customer's

identification and this renewed programming of the call redirection takes place automatically by the means of appropriate intelligent technologies.

2. (Original) A method according to claim 1, characterized in that on the Smart Card (2), SIM and/or USIM applications exist that are assigned to the respective subscriber relationships (3;4).

3. (Currently Amended) A method according to ~~any of the above claims~~ claim 1, characterized in that only one subscriber relationship (3 or 4) is active at any given time.

4. (Currently Amended) A method according to ~~any of the above claims~~ claim 1, characterized in that for each existing subscriber relationship (3;4) an assigned subscriber profile is provided in the home location register HLR (7;8) of the respective network operator.

5. (Currently Amended) A method according to ~~any of the above claims~~ claim 1, characterized in that through intelligent administration and control mechanisms it is ensured that [for]³ the phone number that is transmitted in the calling line identification presentation function, the number of the mobile radio customer is always used that is

specific to the destination network of the call, regardless of the current location of the mobile radio customer, wherein the subscriber being called is always signaled the mobile phone number of the mobile customer that is specific for the given country or network.

6. (Currently Amended) A method according to ~~any of the above claims~~ claim 1, characterized in that the mobile radio customer is assigned only one mobile box (9).

7. (Currently Amended) A method according to ~~any of the above claims~~ claim 1, characterized in that the call redirection in the network of the current location of the mobile radio customer is set to a mobile box (9) and when the subscriber relationship (3;4) is switched, the call redirections are automatically reprogrammed by means of intelligent functions.
